

İlayda Arzu Akkuş

Computer Engineer

ilaydaarzuakkus@gmail.com | LinkedIn: [i-arzu-akkus](#) | GitHub: [iarzuakkus](#) | [iarzuakkus.com](#)

PROFILE

Computer engineer with experience developing projects in software development, artificial intelligence, and data analytics. Experienced in model development, data-driven problem solving, and building end-to-end systems. Most recently, I developed MemorAI; I value learning new technologies and turning them into practical solutions to real-world problems.

EDUCATION

Computer Engineering | Süleyman Demirel University | 2021 – 2025

- GPA: 2.99 / 4.00

EXPERIENCE

- **Software Development Intern | BaşarSoft | 08/2025 – 09/2025 | Remote**

Developed a GIS-based mapping application at BaşarSoft, building geometry management and interactive mapping modules with .NET 8, EF Core, PostGIS, and OpenLayers.

- **Data Mining Intern | CoCRM | 10/2024 – 11/2024 | Remote**

During my voluntary internship at CoCRM Marketing, I developed a web-scraping project that extracted phone numbers and email addresses from websites without using proxies or paid tools.

- **Design Team Lead | Industry and Quality Society | 2023 – 2024 | Isparta**

Designed social media posts for special occasions, event posters, event materials, and sweatshirts. Contributed to design workflows while strengthening my teamwork, creativity, and time-management skills.

TRAINING AND CERTIFICATIONS

- **Teknokampüs AI and Robotics Training | Medeniyet Technopark (02/2026 – 07/2026)**

During this in-person program covering the mathematical foundations and applications of artificial intelligence, I developed MemorAI as my capstone project.

- **EduTech Data and Business Analytics Training | EduTech (05/2026 – 07/2026)**

Participated in a training program focused on data analytics and business analysis processes.

- **TURKCELL Women Writing the Future AI Program (01/2025 – 10/2025)**

The program consisted of two modules. In the first module, I completed practical work on Python, SQL, data processing, machine learning, and deep learning fundamentals. In the second, I developed projects involving natural language processing methods, text cleaning, embedding techniques, and NLP models.

- **Advanced Machine Learning Workshop (BTK)**

A two-week training program on Machine Learning held in Antalya.

PROJECTS

- **Warehouse Optimizer:** Developed an interactive 3D warehouse map for visualizing rack, location, and box data; tracking capacity; managing orders and stock allocation; and optimizing product placement. Added simulations to track forklift and pallet truck movements step by step.
- **MemorAI:** Developed an Adaptive RAG-based Chrome extension that scans web pages, stores their content in a personal knowledge base, answers source-grounded questions, creates notes, and recommends relevant sources.
- **Mapping Application:** Developed an interactive application for creating, editing, listing, and saving points, lines, and polygons on a map.
- **Autonomous Vehicle:** Built an Arduino vehicle that detects obstacles and changes direction; placed second among 77 teams.
- **Web Scraping:** Collected data on 25,000 companies automatically within two weeks (CoCRM).
- **GitHub:** Projects including Sales Prediction and a Netflix Recommender are available on my GitHub profile.

LANGUAGE

- English - **B1**

SKILLS

- **Technical Skills:**
 - **Programming Languages & Frameworks:** Python, SQL, HTML, CSS, .NET 8, EF Core, FastAPI
 - **Artificial Intelligence & Data Science:** Machine Learning, Deep Learning, Natural Language Processing (NLP), Large Language Models (LLMs), RAG Systems, Embeddings, and Semantic Search
 - **Data Management & Analytics:** PostGIS, OpenLayers, Vector Databases, Web Scraping, Data Preprocessing, Feature Engineering, Data Visualization, Power BI
 - **Tools & Methodologies:** Git, GitHub, REST API Development
- **Soft Skills:**
 - Teamwork, Effective Communication, Problem Solving, Analytical Thinking, Time Management, Leadership, Technical Knowledge Transfer, Reporting, and Documentation
